## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Bloomfield.

Regarding claim 1, Bloomfield discloses a security system comprising a first sensor 3, a moving robot 3 having a robot main body, a second sensor (abstract), a robot operation processor, an operation mode data indicating an operation of the robot main body, a controller 9 including first and second sensor information monitor means for collecting first sensor information and second sensor information which are acquired by the first and second sensors, and an operation mode data generator for generating the operation mode data from the first sensor information or the second sensor information and transmitting the operation mode data to the robot operation processor (figures 1, 2b, column 1, line 65- col. 2, lines 60, col. 4, lines 30-67).

Regarding claim 17, Bloomfield discloses a moving robot provided in a security system which includes a stationary sensor installed in an area to be monitored in a building, to monitor the area and a server transmitting abnormal condition data indicating an abnormal condition when the stationary sensor detects the abnormal condition comprising a robot main body 1 movable in the area to be monitored, an on-board sensor (abstract) mounted on the robot main body to monitor the area, a sensor

information monitor collecting at least on-board sensor information acquired by the on-board sensor (fig. 2b), an operation mode data generator generating operation mode data of the robot main body by using at least the on-board sensor information, and a robot operation processor 9 activating the robot main body in accordance with the operation mode data, wherein the moving robot cooperates with the stationary sensor to monitor the area to be monitored (figures 1, 2b, column 1, line 65- col. 2, lines 60, col. 4, lines 30-67).

3. Claims 2-16 and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Everett and Anders teach security systems.
